

Professional Diploma of Gynecological Endoscopy 2021

 [asfmsorg](https://www.facebook.com/asfmsorg)

Where **Success** Begins....

Professional Gynecological Endoscopy offers advanced education in Gynecological Endoscopy. Diploma combines theoretical-practical training ,then an exam as follows:

- 1.Theoretical training (100 hours): is conducted through interactive basic & advanced Thematic modules.
- 2.Practical (hands-on) training: comprises 200 hours at Cairo; some of the necessary Training may be conducted at the candidate's country if there is enough number of candidates (15 - 20candidates).
3. The final Exam (pass rate is 70%).

1. EDUCATIONAL GOALS:

Professional Gynecological Endoscopy offers advanced education in Gynecological Endoscopy.

Diploma combines theoretical-practical then an exam:

Participants will receive high-level training in all relevant aspects for practice in Gynecological Endoscopy provided by sub-specialists in Gynecological Endoscopy, with a consolidated reputation experience in clinical practice & teaching.

Specific goals of the Arab Gynecological Endoscopy Diploma :

1. To provide participants with up-to-date knowledge & skills in all aspects of Gynecological Endoscopy.
2. To create a space to share experiences & knowledge with the experts.
3. To promote debate & critical thinking about new Advances in Gynecological Endoscopy.
4. To receive face-to-face training with real cases.

Target group:.

Specialist in Obstetrics and Gynecology .

Language:

Arabic - English.

Duration & dates:

12 months

Technical Secretariat:

contact@asfms.org

www.asfms.org

00201000108275 (Whats App contact number)

Onsite Live Contents:

- All contents are offered through the main training hall of the ASFMS & The National Training Institute at Cairo (all lectures will be available online for distant learners).
- The teaching program includes 6 thematic modules covering all relevant aspects for the practice of Gynecological Endoscopy.
- A discussion forum opens Live during the duration of the module.

Module 1: Hysteroscopy.

Module 2: Basic Laparoscopy.

Module 3: Intermediate Level of Laparoscopy.

Module 4: Advanced level of Laparoscopy.

Module 5: Highly advanced level of Laparoscopy.

Module 6 : Colposcopy.

2. PRACTICAL TRAINING:

On-site Hands on Training Sessions (Log Book)

Participants will take 100 hours training hours on real patients and Simulator.

Examination:

At the end of all modules, the participant must pass a theoretical & practical exam (pass rate at least %70).

Application period:

Things to take into account before you pre-enrol:

1. Payments:

Accepted students must make an initial payment of %50 before the start of the diploma, & then a second payment of %50 after 4 months of the diploma tuition period.

2. Requirements

- Candidates must be specialist in Obstetrics & Gynecology.
- Candidates must be able to demonstrate competence in English language.
- The most recent C.V. be able to demonstrate competence in English language.

Module 1: Hysteroscopy

- Aim and Significance of Hysteroscopy.
- The Panoramic Hysteroscope. The Rigid Hysteroscope .
- The Steerable Hysteroscope (Hysterofiberscope) .
- Distention Media.
- Instrument Preparation. Hysteroscopy Procedures .
- Office hysteroscopy.
- Examination of the Intracervical Canal and Uterine Cavity.
- Special Manipulation Techniques for Optimal Visualization .
- Visualization of the Difficult-to-Dilate Uterine Cavity .
- Visualization at the Time of Persistent Bleeding .
- Visualization of a Large Tumor .
- Hysteroscopic Biopsy . Hysteroscopy Documentation.
- Indications and Contraindications .
- Clinical Indications for Hysteroscopy .
- Contraindications for Hysteroscopy.
- Hysteroscopic Findings of the Normal and Abnormal Uterus. Normal Findings of the Cervix.
- Pathological Findings of the Cervix .
- Nabothian Cyst.
- Endocervical Polyp .
- Submucosal Cervical Leiomyoma .
- Chronic Cervicitis .
- Cervical Synechia . Endocervical Malignancy.
- Normal Findings of the Uterine Cavity.
- Cyclic Changes in Reproductive Age.
- Postmenopause . Pathological Findings of the Uterine Cavity. Dysfunctional Uterine Bleeding.
- Iatrogenic Bleeding During Long-Term Hormone Therapy.
- Endometrial Hyperplasia.
- Endometrial Carcinoma.
- Nonepithelial Neoplasia of the Endometrium .
- Endometrial Polyp.
- Submucosal Leiomyoma . Uterine Adenomyosis . Endometritis.
- Foreign Bodies.
- Traumatic Intrauterine Adhesions (Asherman's Syndrome)
- Early Abnormal Pregnancy-Related Uterine Bleeding.
- Mullerian duct anomalies.
- Global endometrial ablation.

• Tubal sterilization

- Types of hysteroscopes
- The tips of hysterooptics
- Hystero-electrosurgery.

Module 2 Basic Laparoscopy:

- Introduction/history.
- Advantages, disadvantages and limitations of laparoscopy.
- Contraindications and risk factors.
- Physiological changes during laparoscopy.
- Patient preparation.
- Pelvic anatomy seen through laparoscopy.
- Anaesthesia during laparoscopy.
- Postoperative management.
- Equipment.
- Problems and solutions with imaging and viewing.
- Sterilization and maintenance of optics and camera.
- Instruments and access.
- Creation of pneumoperitoneum/access.
- Gasless laparoscopy.
- Pneumoperitoneum by Veress needle.
- Problems and solutions of Veress needle and Pneumoperitoneum.
- Primary cannula insertion.
- Open cannulation (Hasson's technique).
- Secondary cannula.
- Instruments for dissection.
- Diathermy/Electrocautry.
- Dissection of tissue.
- Homeostasis.
- Suction/irrigation.
- Laser.
- Ligation and suturing.
- Specimen extraction.

Module 3: Intermediate level of laparoscopy.

- adhesolysis.
- Laparoscopic tubal disconnection.
- Tubal sterilization.
- Hydrosalpinx.
- Laparoscopic ovarian drilling
- Ovarian cystectomy.
- Endometriosis
- Ovarian torsion
- Ectopic pregnancy

Module 4: Advanced Level of Laparoscopy.

- Female genital anomalies Classifications and endoscopic management.
- Challenging mullerian anomalies.
- Hysterectomy.
- Myomectomy.
- Chronic pelvic pain.
- Burch urethropecy.
- Sacral colpopexy.
- Prevention of post operative adhesions.

Module 5 : Highly AdvancedLevel

1. Laparoscopy in oncology:
 - Ovarian transposition.
 - Fertelity preservation.
 - Lymphadenectomy.
2. Best Practices.
3. Patient communications.

Module 6: Colposcopy

- Basic principles of Colposcopy.
- The normal cervix and Colposcopic appearance.
- Natural history of cervical carcinoma, HPV, and vaccination.
- Colposcopic appearance of CIN.
- Colposcopic directed biopsies.
- Invasive cervical disease.
- Glandular disease.
- Inflammatory and infective conditions of the cervix and anogenital tract.
- Management techniques.
- vaginal abnormalities.
- Bulgaria disease.
- Pregnancy and puerperium.
- Menopause, contraception, immunosuppression, HIV and smoking.
